DETAILED ACTION

1. This office action is in response to the amendment filed on September 14, 2007, in which claims 11-43 are presented for further examination.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Todd M. Oberdick (Reg. No. 44,268) on October 1, 2007.

The application has been amended as follows:

In the claim:

11. (Currently amended) A system for displaying data instantiating and inflating objects from a multidimensional database to a user, said system comprising:
 - a system computer having a processor and a memory;
 - a multidimensional database accessible by said computer, said multidimensional database having objects stored thereon; and
 - object model software executing on said system computer ~~for accessing~~ which accesses said multidimensional database, ~~to for instantiating and inflating~~ instantiate and inflate a predefined group of specified objects stored on said database up-front a first time said multidimensional database is accessed, and ~~instantiating and inflating~~ instantiate and inflate

nonspecified objects which are not included in the predefined group of specified objects stored on said database on demand as each of the nonspecified objects is accessed.

12. (Currently amended) The system of Claim 11 further comprising ~~software executing on said computer for receiving~~ receiving from ~~the~~ a user an indication of specified objects.

13. (Currently amended) The system of Claim 11 further comprising ~~software executing on said computer for receiving~~ receiving from ~~the~~ a user state information.

20. (Currently amended) The system of Claim 11 further comprising ~~software executing on said computer for receiving~~ receiving from ~~the~~ a user an indication of specified objects.

24. (Currently amended) A system for instantiating and inflating objects from a multidimensional OLAP database, said system to a user, said system comprising:

a system computer, having a processor and a memory;

a multidimensional database accessible by said computer, said multidimensional database having objects stored thereon; and

object model software executing on said system computer for accessing which accesses said multidimensional database ~~for instantiating and inflating~~ to instantiate and inflate a predefined group of specified objects stored on said multidimensional database up-front a first time said multidimensional database is accessed, and ~~for instantiating and inflating~~ to instantiate and inflate nonspecified objects which are not included in the predefined group of

specified objects stored on said database on demand as each of the nonspecified objects is accessed; ~~and , wherein said object model software executing on said computer for receiving~~ receives from the user an indication of specified objects and state information.

27. (Currently amended) A system for displaying data instantiating and inflating objects from a multidimensional database to a user, said system comprising: a system computer; a multidimensional database accessible by said computer, said multidimensional database having objects stored thereon; and

object model software executing on said system computer ~~for accessing~~ which accesses said multidimensional database, ~~for instantiating and inflating to instantiate and inflate~~ a predefined group of specified objects stored on said multidimensional database up-front a first time said multidimensional database is accessed, ~~and for and to instantiating and inflating~~ instantiate and inflate nonspecified objects which are not included in the predefined group of specified objects stored on said multidimensional database on demand as each of the nonspecified objects is accessed, wherein said object model software employs an object model comprising: a dataspace comprising at least one dataserver; at least one cube object stored on each of said at least one dataserver, each of said at least one cube object comprising at least one saved view of data; and at least one dimension object stored on each of said at least one dataserver, each of said at least one dimension object comprising at least one saved subset of elements.

40. (Currently amended) The system of Claim 39 further comprising ~~software executing on said computer for~~ receiving from the user an indication of specified objects.

Art Unit: 2162

36. (Currently amended) The system of Claim 27 further comprising ~~software executing on said computer for~~ receiving from the user state information.

Allowable Subject Matter

3. Claims 11-43 are allowable in light of the applicant's arguments and in light of the prior art made of record.
